

Preventing Blood Clots While in the Hospital

What is it?

A new video resource is available in Maestro Care in English and Spanish to help your patients prevent blood clots while they are in the hospital.

Where can I find it?

Access the video in clinical references by searching for “preventing blood clots.”

When should I use this?

- Show patients the video during admission and any time you need to reinforce admission education.
- Print out the clinical reference so patients and caregivers can watch it more than once.
